PROJECTS

Action Land (A toy selling website)   May-2023   Live Link | Client | Server

Technologies: HTML, CSS, JavaScript (React) for interactive user interface development. Node.js, Express.js, MongoDB for server-side logic, API handling, and data management.

- Interactive product pages with detailed descriptions and high-quality images to showcase toys.
- Robust product catalog with search and filtering options for easy toy exploration.
- Resulted in increased sales, enhanced customer satisfaction, and streamlined inventory management.

Cooking Master (A chef searching website)   Apr-2023   Live Link | Client | Server

Technologies: HTML, CSS, JavaScript (React) , Firebase (Authentication system)

- Implemented a user-friendly chef searching website where visitors can easily search for skilled chefs and explore their recipes.
- Utilized Firebase authentication system to ensure secure user registration, login, and personalized recipe saving functionality.
- Enhanced user experience by enabling the ability to bookmark favorite recipes

Apply Mate (A Job Apply website)   Apr-2023   Live Link | GitHub

Technologies: HTML, CSS, JavaScript (React), React Router

- Developed Apply Mate, a responsive single-page web application using HTML5, Vanilla CSS, React, and React Router, delivering an intuitive user experience across desktop and mobile devices.
- Implemented advanced features such as data filtering, dynamic data loading through API calls, and integration of graphs and charts for data visualization.
- Utilized graphs and charts to visually represent data, empowering users with clear insights and enhancing decision-making capabilities in their job search.
